## 1 GROUP COUNSELING CALCULATION:

Formula: (# minutes in the group divided by # of participants in the group) times (LOC group rate divided by 15 to get per minute rate) = amount claimed per person

Standard: Minimum group duration is 60 minutes and maximum 90 minutes. Minimum 2 persons and maximum 12 persons per group.

Examples:  $(60 \text{ minute group} \pm 10 \text{ participants}) \text{ x } (\$1.98 \text{ ASAM } 1.0) = \$11.88 \text{ per person or } \$118.80 \text{ per group } (\text{each person claimed separately})$ 

(60 minute group ÷ 5 participants) x (\$1.98 ASAM 1.0) = \$23.76 per person or \$118.80 per group (each person claimed separately)

(90 minute group ÷ 12 participants) x (\$1.98 ASAM 1.0) = \$14.85 per person or \$178.20 per group (each person claimed separately)

(90 minute group ÷ 6 participants) x (\$1.98 ASAM 1.0) = \$29.70 per person or \$178.20 per group (each person claimed separately)

- 2 If services are not provided for 30 days an alert will be sent via Sage to notify the contractor to discharge the individual. If after 45 days no services have been provided, an administrative discharge will be automatically be completed and the County monitors will discuss the deficiency at the next site visit.
- 3 An individual cannot be concurrently enrolled in two or more levels of care (except OTP, RBH) or be enrolled by more than one contractor at a time (except OTP, RBH).
- 4 If relapse risk is deemed to be significant without immediate placement in residential care, a residential treatment provider may admit an individual prior to receiving residential preauthorization, with the understanding that preauthorization denials will result in financial loss, whereas preauthorization approvals will be retroactively reimbursed to the date of admission. For example, a residential treatment provider may choose to accept the financial risk of admitting residential cases during the weekend, with the understanding that SAPC will render an authorization decision on the first business day and within 24 hours of receiving the request.
- 5 The first residential treatment (ASAM 3.1, 3.3, 3.5) admission for adults 21 years of age and older will always be paid by Drug Medi-Cal for eligible beneficiaries even if less than seven (7) calendar days. For subsequent residential stays where the patient discharges (whether voluntarily or involuntarily) within seven (7) calendar days, the stay will be reimbursed with non-DMC funds. This will help preserve the two allowable DMC reimbursable residential admissions per year. There will be no cap on the number of grace period used for residential stays less than seven (7) calendar days. Residential stays greater than seven (7) calendar days will be reimbursed with DMC up to the service limit.
- 6 Recovery Bridge Housing participants must be concurrently enrolled in outpatient (ASAM 1.0), intensive outpatient (ASAM 2.1), opioid treatment programs (ASAM 1-OTP) or ambulatory withdrawal management (ASAM 1-WM) services.
